Faculty of Engineering
CSE- Academic Year 2026-27
Java Programming – Lab Batch 2024-28

Lab Assignment No:- 29	
Name of Student	Abishek Yadav
PRN No.	25070122014
Batch	A1
Class	CSE
Academic Year & Semester	2026-2027/3RD
Date of Submission	18/10/2026
Title of Assignment:	Write a JSP application to demonstrate the basic concepts of Java Server Pages.
Theory:	Java Server Pages (JSP) is a server-side technology used for developing dynamic web applications. JSP allows Java code to be embedded within HTML pages using special JSP tags. When a JSP page is requested, the web server automatically translates it into a servlet, compiles it, and executes it to generate dynamic web content. JSP supports implicit objects, directives, scripting elements, expression language, and standard tag libraries. It simplifies web development by separating presentation from business logic. JSP is commonly used with Servlets and JDBC for building database-driven web applications.
Practice Questions	1. Create a JSP page to display student information entered by the user.

CODE:

```
<!DOCTYPE html>
<html>
<head>
    <title>Student Information</title>
</head>
<body>
    <h2>Student Information</h2>
    <form method="post">
        Name:
        <input type="text" name="name"><br><br>
        Roll Number:
        <input type="text" name="roll"><br><br>
        Course:
        <input type="text" name="course"><br><br>
        <input type="submit" value="Submit">
    </form>
<%
    String name = request.getParameter("name");
    String roll = request.getParameter("roll");
    String course = request.getParameter("course");
    if (name != null) {
%>
    <h3>Submitted Student Information</h3>
    Name: <%= name %><br>
    Roll Number: <%= roll %><br>
    Course: <%= course %><br>
<%
    }
%>
</body>
</html>
```

OUTPUT:

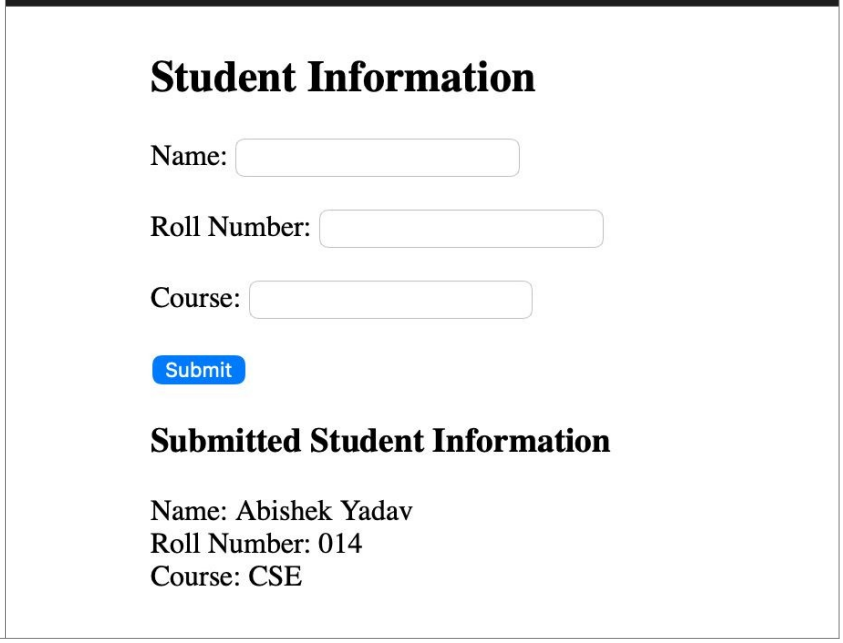

```
C:\Users\Bina Computer\OneDrive\Documents\Java>cd apache-tomcat-10.1.24\bin
C:\Users\Bina Computer\OneDrive\Documents\Java\apache-tomcat-10.1.24\
bin>startup.bat
Using CATALINA_BASE:   "C:\Users\Bina Computer\OneDrive\Documents\Java\apache-
tomcat-10.1.24"
Using CATALINA_HOME:   "C:\Users\Bina Computer\OneDrive\Documents\Java\apache-
tomcat-10.1.24"
Using CATALINA_TMPDIR: "C:\Users\Bina Computer\OneDrive\Documents\Java\apache-
tomcat-10.1.24\temp"
Using JRE_HOME:
```

```
Tomcat started.

URL: http://localhost:8080/StudentApp/student.jsp

Student Information
Name: [ Abishek Yadav ]
Roll Number: [ 25070122014 ]
Course: [ Java ]
[ Submit ]

Submitted Student Information
Name: Abishek Yadav
Roll Number: 25070122014
Course: Java
```

QUESTION	Create a JSP application that takes user registration details such as Name, Email, Phone Number, and Password, and displays the submitted information on a result JSP page.

CODE:

register.jsp

```
<!DOCTYPE html>
<html>
<head>
    <title>Registration Form</title>
</head>
<body>
    <h2>Student Registration Form</h2>
    <form action="result.jsp" method="post">
        Name:
        <input type="text" name="name"><br><br>
        Email:
        <input type="email" name="email"><br><br>
        Phone Number:
        <input type="text" name="phone"><br><br>
        Password:
        <input type="password" name="password"><br><br>
        <input type="submit" value="Register">
    </form>
</body>
</html>
```

result.jsp

```
<!DOCTYPE html>
<html>
<head>
    <title>Registration Result</title>
</head>
<body>
    <h2>Registration Successful</h2>
<%
    String name = request.getParameter("name");
    String email = request.getParameter("email");
    String phone = request.getParameter("phone");
    String password = request.getParameter("password");
%>
    Name: <%= name %><br><br>
    Email: <%= email %><br><br>
```

```
    Phone Number: <%= phone %><br><br>
    Password: <%= password %><br><br>
</body>
</html>
```

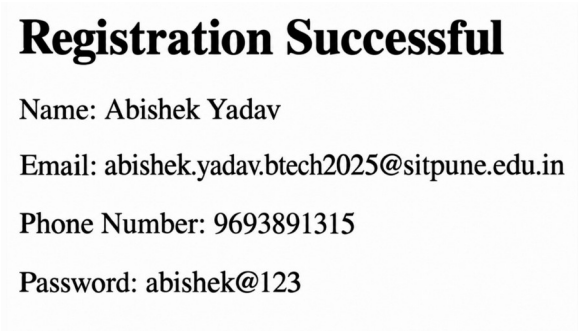

OUTPUT:

```
URL: http://localhost:8080/StudentApp/register.jsp

Student Registration Form
Name: [ Abishek Yadav ]
Email: [ abishek.yadav.btech2025@sitpune.edu.in ]
Phone Number: [ +91 9693891315 ]
Password: [ ********** ]
[ Register ]

URL: http://localhost:8080/StudentApp/result.jsp

Registration Successful
Name: Abishek Yadav
Email: abishek.yadav.btech2025@sitpune.edu.in
Phone Number: +91 9693891315
Password: abishek@123
```

Conclusion	The JSP applications successfully demonstrate the basic concepts of Java Server Pages. The first exercise accepts and displays student information using scriptlets and expressions on a single JSP page, while the second uses two JSP pages to accept registration details and display the submitted information on a result page using the request implicit object.
